Mikhail Zykov

Frontend Engineer | React, TypeScript, Web Performance

Almaty, Kazakhstan | Open to relocation (visa sponsorship required) and remote
zykov.mg@gmail.com | zykov.me | linkedin.com/in/zykov-mg | github.com/ykropchik

SUMMARY

Frontend Engineer with 4+ years of experience building and optimizing a high-traffic online classifieds marketplace (1.5M daily active users) with React and TypeScript. Focused on web performance (Core Web Vitals, SSR, bundle size), build tooling and design systems, with product changes measured through A/B experiments. Cut the JavaScript bundle by 47%, build time by 60% and SSR first render time by 40%. Owns projects from research and proof of concept to rollout and monitoring, wrote the team's JavaScript, TypeScript and CSS style guides, and mentors students and junior engineers.

SKILLS

- **Languages:** TypeScript, JavaScript (ES2015+), HTML5, CSS3, Sass/SCSS
- **Frontend:** React 19, Redux, Zustand, Immer, Storybook, Ant Design, floating-ui, jQuery (legacy migration)
- **Testing:** Jest, unit testing
- **Web Performance:** Core Web Vitals (INP, CLS), server-side rendering (SSR), BFCache, code splitting, Lighthouse, web-vitals, Chrome DevTools Performance panel
- **Build & Tooling:** Git, webpack, SWC, Babel, PostCSS, ESLint, typescript-eslint, style-dictionary, design tokens, CI/CD (TeamCity)
- **Backend & APIs:** Node.js, REST/JSON APIs, RFC 9457, WebSocket, PHP (working knowledge)
- **Monitoring & Experiments:** A/B testing (GrowthBook), Sentry, source maps, Prometheus, ClickHouse, Elasticsearch
- **Collaboration:** Code review, mentoring, Figma, technical research and RFCs, code style guides, cross-functional work with designers, backend and product

EXPERIENCE

Frontend Engineer, FarPost, Almaty, Kazakhstan (Hybrid)

Mar 2022 – Present

Large online classifieds marketplace with 1.5M daily active users and 40M page views per day.

Performance and build tooling

- Led the migration from RequireJS to webpack and moved the build from Babel to SWC, reducing JS bundle size by 47%, JavaScript bytes per request in production by 37% and build time by 60%.
- Upgraded the webpack, loader and PostCSS toolchain, reworked SplitChunks grouping for shared libraries and migrated Sass from @import to @use, removing 949 deprecation warnings.
- Contributed to the Node.js React SSR service: cut first render time from 442 ms to 265 ms (-40%) with a startup warm-up step, enabled SSR for admin users in production, and added response-time and success-rate monitoring with a 200 ms threshold.
- Diagnosed high INP on mobile search (20% of mobile requests above 200 ms) with Lighthouse and web-vitals, removed main-thread blocking and costly reflows, and validated the fix in an A/B experiment.
- Made high-traffic pages eligible for the browser back-forward cache by managing WebSocket and BroadcastChannel lifecycles, and built BFCache hit-rate monitoring with sendBeacon and Prometheus.
- Fixed white screens and reloads during fast infinite scroll on iOS 18 with content-visibility: auto, and removed layout shifts on a key catalog page (CLS 0.026).
- Evaluated Vite, RSPack, Rollup and Parcel 2 as webpack replacements against code splitting, CSS import and legacy browser requirements, and recommended Vite.

Product features and A/B experiments

- Owned GrowthBook A/B experiments end to end, including tracking events: a more visible Subscribe button raised users saving subscriptions by 24% and subscriptions by 11.5%; larger gallery navigation dots raised scroll rate by 21% on Android and 37% on iOS.
- Redesigned the seller verification flow with pre-filled applications and an invoice flow for legal entities, doubling verification requests and growing verified seller accounts by 10%.
- Rebuilt the listing page map on Yandex Maps 3 behind an A/B experiment and extracted shared map logic into one module, increasing listing views from map points by 18% and map zoom usage by 4.4x.
- Built user-facing React features, including active session management with device revocation and a photo-based vehicle generation filter for parts search.
- Tracked down hard cross-browser bugs, such as multi-touch events breaking the carousel and map in Android WebView and intermittent photo uploads failing in mobile apps, through log analysis.

Architecture, code quality and mentoring

- Set up a design token pipeline with style-dictionary (JSON to themed CSS/SCSS), replaced hardcoded colors with tokens and generated token documentation in Storybook.
- Integrated Storybook with webpack and SWC to replace a legacy samples page, and set up per-branch Storybook builds in CI so designers review components before merge.
- Evaluated seven React state management options (Zustand, Redux Toolkit, MobX, Jotai, Valtio and others) with a proof of concept, chose Zustand and migrated the payment form state to Zustand and Immer.
- Moved the codebase from the Airbnb ESLint config to typescript-eslint strict and stylistic configs, removed import cycles and wrote JavaScript, TypeScript and CSS style guides, including rules for an AI coding agent.
- Replaced legacy jQuery plugins with floating-ui, imask and CSS position: sticky, migrated an admin panel from JSP to React with Ant Design and upgraded React to 19.2.
- Leading the migration from CodeMirror 5 to 6 in TypeScript, page by page behind a feature flag, and the migration of client-side error logging from an in-house system to Sentry with Debug ID source maps.
- Wrote the requirements for a standard JSON API response format based on RFC 9457, which a backend engineer then implemented for frontend clients.
- Regularly review teammates' code; ran three internships for university students and helped a junior engineer onboard into the codebase.

PROJECTS

- **zykov.me** (github.com/ykropchik/zykov.me): Personal website, open source: React 19, TypeScript, Vite, static pre-rendering (vite-react-ssg), Motion animations, SCSS modules, ESLint and Stylelint, deployed on Cloudflare Workers.

EDUCATION

Bachelor of Science in Computer Science (Software and Administration of Information Systems), Far Eastern Federal University, Vladivostok, Russia, 2022

LANGUAGES

Russian (Native), English (Professional working proficiency)
